Introduction

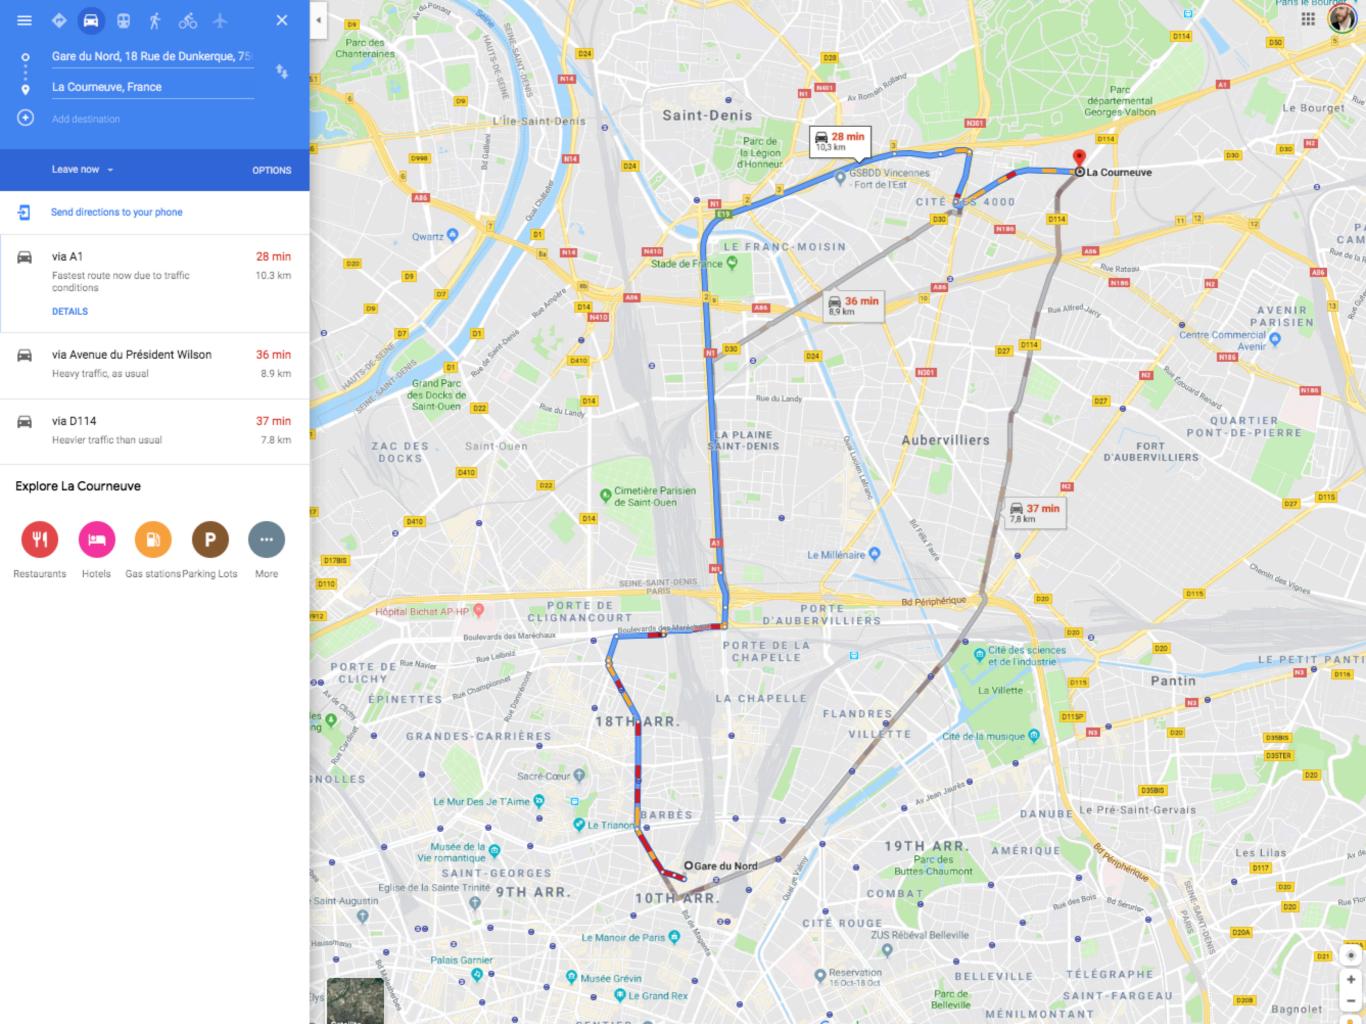

Entre règles et statistique

- Sur base d'un modèle abstrait à priori
- Examples: Systèmes
 experts, approche
 Capstone (US), Records in
 Context (RiC)
- Désavantages : complexité de la création du modèle et de son implémentation

- Sur base des données même
- Approche

- non-supervisée, par exemple topic modelling et word embeddings
- Désavantages : création du corpus d'entrainement et l'évaluation

Encoded Archival Description Tag Library, Version 2002

EAD Elements

Description:

The proper noun designation for an individual, including any or all of that individual's forenames, surnames, hon

All names in a finding aid do not have to be tagged. One option is to tag those names for which access other that undifferentiated keyword retrieval is desired. Use of controlled vocabulary forms is recommended to facilitate ac within and across finding aid systems. The <persname> element may be used in text elements such as . To personal name with major representation in the materials being described, nest <personame> within the <control element.

The ROLE attribute can be used to specify the relationship(s) of the name to the materials being described, for ϵ

Records in Contexts - Conceptual Model

EGAD - Expert Group on Archival Description 29 August 2016

Records in Context - Conceptual Model

EGAD - Expert Group on Archival Description

Since 2012, with members from thirteen countries, the EGAD has been developing the new standard for the description of records based on archival principles. In the course of its work it has taken into consideration critiques of current practices, established and emerging national conceptual models as well as the models of allied professional communities, and the opportunities presented by new and emerging communication technologies. The objective of the standard is to reconcile, integrate, and build on the four existing standards: General International Standard Archival Description (ISAD(G)); International Standard Archival Authority Records—Corporate Bodies, Persons, and Families (ISAAR(CPF)); International Standard Description of Functions (ISDF); and International Standard Description of Institutions with Archival Holdings (ISDIAH).
